SUMMARY

B.Tech CSE student, graduating 2027, who likes building things that work end to end. I have shipped three full-stack and AI projects, and spent two internships on penetration testing and data analytics. Looking for software engineering or cloud security roles where I can keep building and keep things secure.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Web & Backend: React, Node.js, Express.js, Vite, REST APIs, Firebase

AI & Data: Google Gemini API, Ollama (LLMs), Supervised Learning, Data Analytics Pipelines, Jupyter Notebook, Google Colab

Security: Penetration Testing, Vulnerability Assessment, Network Scanning, Threat Analysis

Tools & Deployment: Git, GitHub, Vercel, VS Code

Core Concepts: Data Structures, OOP, Database Management, System Design

INTERNSHIPS

Ethical Hacking & Penetration Testing Intern | C-DAC, Noida (MeitY Cyber Gyan Project) | Jun – Aug 2025

- Ran penetration tests on simulated environments, covering network vulnerability scanning and threat analysis.
- Followed a structured ethical hacking methodology to find weaknesses and assess how serious they were, which is the groundwork for security and cloud security roles.

AI & Data Analytics Intern | AICTE x Shell x Edunet Foundation (Skills4Future) | Jun – Jul 2025

- Built end-to-end data analytics pipelines in Python, from raw data to cleaned, analysis-ready datasets.
- Trained and evaluated supervised learning models on industry-relevant datasets for program deliverables.

PROJECTS

PayShield: UPI Screenshot Fraud Checker | React, TypeScript, Express, Gemini API | [GitHub](#) | [Live Demo](#)

- Built a full-stack web app where users upload a UPI payment screenshot and get a check for signs of editing, plus what to verify next.
- Integrated Google Gemini vision for image analysis, with a local heuristics fallback so a scan still returns a result when the AI call fails.
- Kept the API key server-side only, added a health-check endpoint, and deployed the Express API as Vercel serverless functions.

TripCheck: AI Trip Planner | React, TypeScript, Vite, Express, Gemini API | [GitHub](#) | [Live Demo](#)

- Built a trip planner that generates multi-day itineraries with budget, packing and group ideas from an origin and destination.
- Made the Gemini integration dependable: model fallback list, automatic retries, repair of truncated JSON, and a response schema to keep long itineraries well formed.
- Added worldwide place search backed by a server-side index of 135k+ cities and towns, with Google Maps links for directions.
- Deployed on Vercel with the Express backend running as serverless API routes.

CrickAI: AI-Powered Cricket Training System | Node.js, Firebase, Ollama LLM

- Built an LLM-driven coaching assistant (Ollama) that gives players and coaches training feedback in plain language.
- Connected it to a real-time Firebase backend and shipped a cross-platform mobile interface using the Antigravity framework.

EDUCATION

B.Tech, Computer Science & Engineering | Gurugram University | 2023 – 2027 (Expected)

Class XII (CBSE) | Vivekanand Sr. Sec. School, Dharuhera | 2023

CERTIFICATIONS

- CS50x: Introduction to Computer Science | Harvard University | Jun – Aug 2024
- IBM Data Science Certification | IBM
- Ethical Hacking & Penetration Testing | C-DAC, Noida (Cyber Gyan Project) | 2025
- AI & Data Analytics | AICTE x Shell x Edunet Foundation (Skills4Future) | 2025
